The focus of the survey is Gray whales (northbound) during migration. We recorded sighting data for all cetaceans, including a distinguishing tally of Gray whales (southbound), as well as observations of Sea otters, Harbor seals, and rare pinnipeds. NOTE: California sea lions range throughout and are almost always present. We do not enter sightings of sea lions unless on the sand, sick or injured, or if we see them in a particularly large group, or if they are involved in a vessel interaction.

Note: Of the species sighted, only Gray whales (north and southbound) were migrating past the Point. Their tallies indicate the number of unique animals observed through the survey. All other cetaceans, pinnipeds, and Sea otters were sometimes sighted multiple times during a day and likely seen over and over on different days as the survey progressed. The tallies of these species represent the number of animals (not necessarily unique) documented throughout the survey.
