

Bottlenose dolphin *Tursiops truncatus*

OBSERVED FROM COUNTER POINT - 2017 DURING GWC SURVEY
OF NORTHBOUND GRAY WHALE MIGRATION

Total dolphins: 581 calves: 59 Number of sightings: 143

KEY: Bottlenose dolphins move up and down the coast in this area. The coastal Bottlenose dolphin we see travel up and down the coast. Many travel between Ensenada, Mexico and the San Francisco Bay area. In an effort to monitor this, perhaps growing population, researchers make photo-identification images, mostly from small boats. When the dolphins pass by us very close to shore, we try to make images that contribute to the monitoring effort.

Because the dolphins do move back and forth, we may see the same dolphins more than once the same day and several times over the survey. Our counts, then, represent the sum of our sightings and not a representation of the population of Bottlenose dolphins in this area.

and travel between Ensenada, Mexico and the San Francisco Area. It is likely that we observe some of the same dolphins at different times during the same day and on subsequent days. Without photo-identification, we cannot determine individual dolphins

In this report, only sightings on-effort are presented: sightings at which two or more, qualified observers were on duty with proper equipment, with adequate visibility, and sea state at or below Beaufort 4.

Quality is overall observation quality. The number is Beaufort scale. Position of sighting is represented by true bearing and distance in meters from our observation platform on Counter Point, which faces south.

ND or nd = not determined; and NI or ni = not indicated.
